

99664C | Order Picking Cart

ALUMINUM SOLUTIONS

Order Picking Cart #99664 is designed to improve efficiency, when used with an order selector, within distribution centers. The cart is made from aluminum, reducing the weight of the product by 1/3 when compared to traditional steel carts. The shelves of #99664 have been made to be easily adjustable in order to fit the needs of companies that offer a wide variety of products in various sizes. The enhancement of quick change, angled, and adjustable shelving saves time and improves utilization capabilities in comparison to other picking carts that are constructed with solid welding, making them unable to transform to meet more than one, predetermined capacity. This is why the #99664 is a preferred piece of equipment among distribution centers. Not only is it lightweight and easier to use, but it is more adaptable to fit changing needs and applications.

The adaptability of the #99664, through its' advanced design upgrades, has made it an in-demand piece of equipment.

The Order Picking Cart #99664 offers many advantages to distribution centers including its' ability to increase productivity and efficiency when compared to traditional stacking pallets; workplace safety through its' lightweight design, easy portability, and angled shelving for ease of loading/unloading product; and flexibility in process implementation. The additional ability of customization of the design and features has taken the Order Picking Cart #99664 to a new level of innovation over traditional order fulfillment equipment.

Model No.	Lift Type	Size W-H-D	Deck Height	Ship Lbs.
FORKLIFT PICKING CARTS - EQUIPPED WITH TWO 30" DEEP SHELVES
